In an era marked by rapid advancements in technology and a growing emphasis on personal health and wellness, the emergence of innovative medical devices has become increasingly prevalent. Among these innovations stands the **AI Stethoscope**—a device designed to revolutionize home healthcare by providing users with convenient and reliable access to medical diagnostics.

Hello, I just bought the 3D printing file, but I don't know how to use Autodesk Fusion. Do you think you could share the file with me in .stl format so I can print it in Cura? When I export it to Cura, it creates a top and bottom layer on the model, so it prints it as if it were a closed box.
